

# Score-Tops™

## Adjustable Scoring System

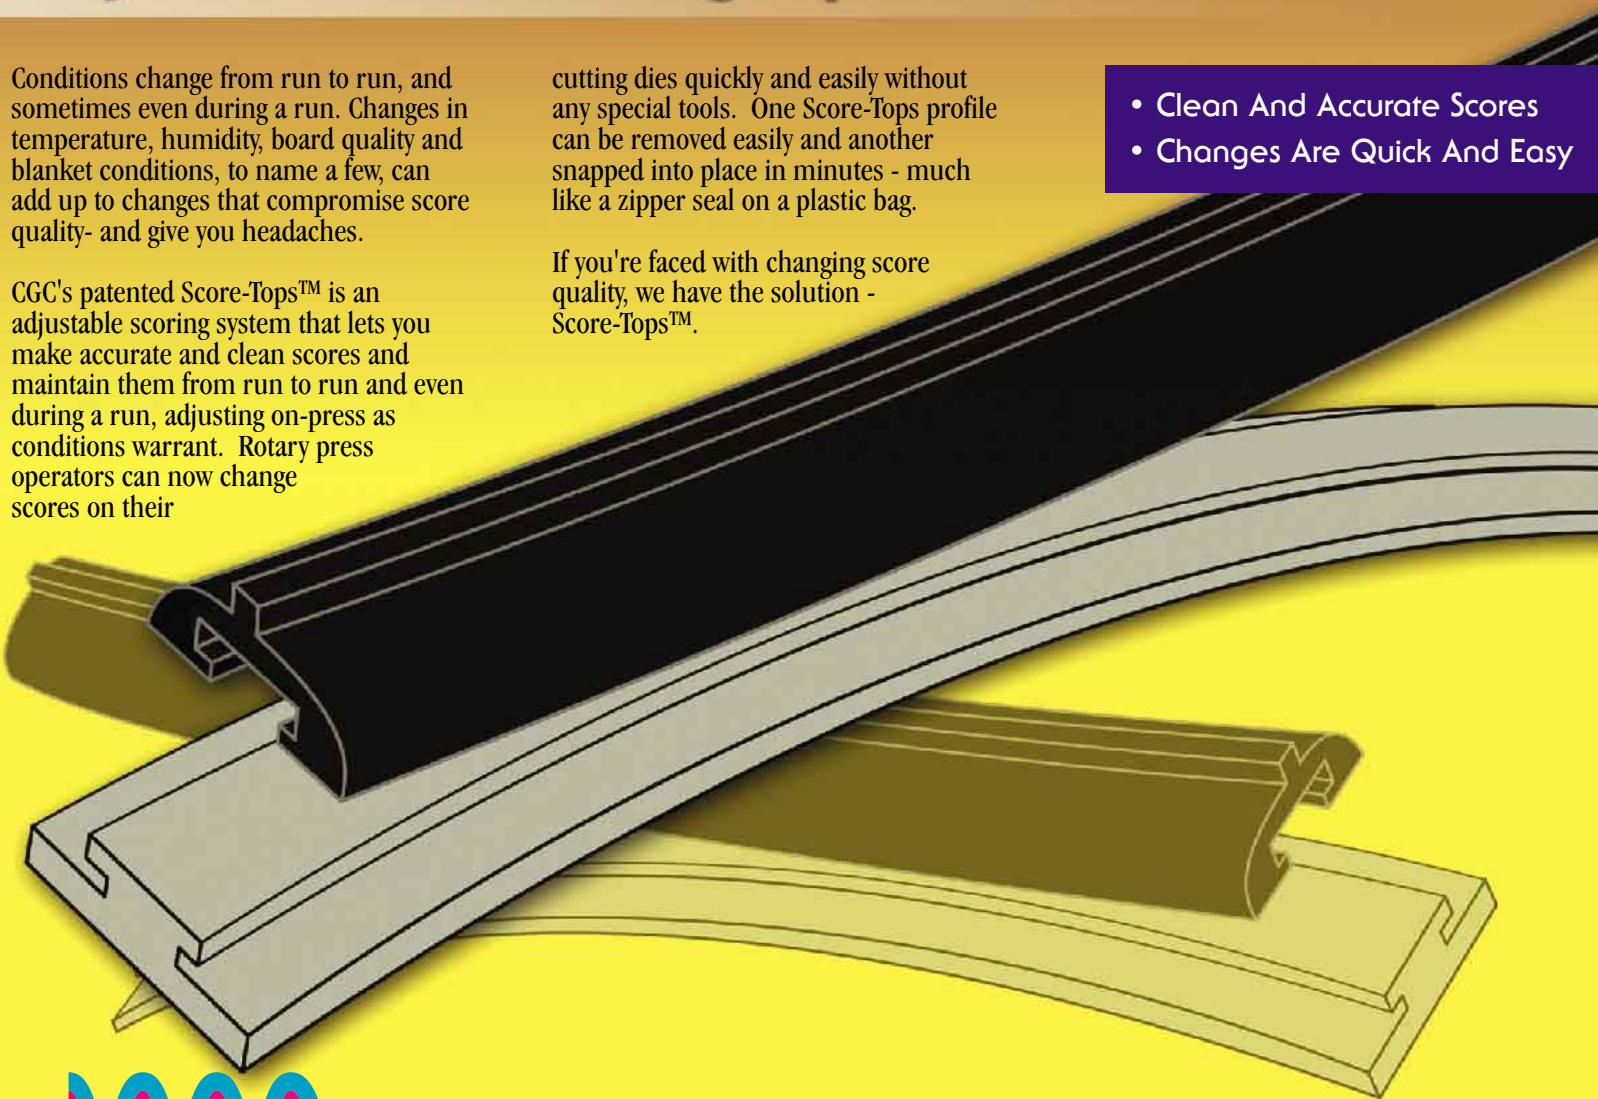

Conditions change from run to run, and sometimes even during a run. Changes in temperature, humidity, board quality and blanket conditions, to name a few, can add up to changes that compromise score quality- and give you headaches.

CGC's patented Score-Tops™ is an adjustable scoring system that lets you make accurate and clean scores and maintain them from run to run and even during a run, adjusting on-press as conditions warrant. Rotary press operators can now change scores on their

cutting dies quickly and easily without any special tools. One Score-Tops profile can be removed easily and another snapped into place in minutes - much like a zipper seal on a plastic bag.

If you're faced with changing score quality, we have the solution - Score-Tops™.

- Clean And Accurate Scores
- Changes Are Quick And Easy
