

Ultra 8™

High Test Diecutting Solution

Tough board requires tough cutting rule. That's why Ultra 8 is the rule of choice for rotary die cutting of high test single wall, double wall and triple wall corrugated board.

Like the teeth of a shark, Ultra 8 cutting rule has large, sharp teeth designed to penetrate and then slice into its

prey. And unlike other fish in the pond, Ultra 8 stays in the fight. Its body is extra strong and its induction-hardened edges stay sharp and last longer.

Ultra 8 cuts deep, so we recommend an overall height of 1.030". It is also available in heights up to 1.5" for biting into triple wall. Other rule heights

- Aggressive Profile
- Extra Sharp
- Induction Hardened

are available upon request.

Caution: Handle this predator with extreme care!
